

BENARD ZIBIRI DAVID

Full Stack Software Engineer

React | Vue.js | TypeScript | Django | Node.js | Bun | Docker | Linux | CI/CD

Abuja, Nigeria | +2349038660972 | davidbenard.bd@gmail.com

LinkedIn: [linkedin.com/in/david-benard-196961121](https://www.linkedin.com/in/david-benard-196961121) | GitHub: github.com/traj3ctory | Portfolio: bzdavid.netlify.app

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 6+ years of experience building scalable web applications, backend services, gaming product interfaces, and data-driven health platforms. Strong frontend depth in React, Vue.js, Next.js, and TypeScript, with backend experience across Django, Node.js, Bun/ElysiaJS, REST APIs, PostgreSQL, and MongoDB. Practical DevOps experience from GGHN, including Dockerized deployments, Linux server management, Nginx, SSL, GitLab CI/CD, and production/staging environment support.

TECHNICAL SKILLS

Frontend: React, Vue.js, Next.js, TypeScript, JavaScript, TailwindCSS, Redux, React Query, Zustand, Leaflet

Backend: Django, Python, Node.js, Bun, ElysiaJS, Express, NestJS, PHP, REST APIs, API integration

Infrastructure & DevOps: Docker, Linux, Nginx, GitLab CI/CD, GitHub Actions, AWS EC2/S3, SSL, deployment automation

Database & Data: PostgreSQL, MongoDB, ETL scripting, data validation, analytics dashboards, IndexedDB caching

PROFESSIONAL EXPERIENCE

Bitville Gaming

Full Stack Software Engineer | May 2025 - Present

- Build gaming product interfaces and betting game experiences using Vue.js, TypeScript, and reusable frontend patterns.
- Develop internal platform tools for game configuration, game management workflows, operational tasks, and product administration.
- Implement backend features and API tasks using Bun, ElysiaJS, PostgreSQL, and PHP where required by platform requirements.
- Translate product requirements into UI components, API integrations, backend task implementations, and maintainable game-management workflows.
- Use Cursor and Claude for technical planning, implementation breakdowns, refactoring reviews, and faster iteration while owning final engineering decisions.

Tech: Vue.js | TypeScript | Bun | ElysiaJS | PostgreSQL | Full-Stack Product Development

Georgetown Global Health Nigeria (GGHN)

Full Stack Software Engineer - Frontend, Backend & DevOps | Feb 2023 - Apr 2025

- Led frontend and full-stack development across eN-LIS and the National PHC Dashboard, supporting systems used by national healthcare stakeholders.
- Built scalable React/TypeScript interfaces and Django-backed workflows for laboratory operations, analytics, reporting, maps, and data visualization.
- Developed Python ETL scripts to validate, clean, and transform high-volume health records collected via Kobo Collect, improving data quality and processing speed.
- Improved analytics performance through PostgreSQL indexing, React Query, IndexedDB caching, and optimized data-fetching patterns for large datasets.

- Owned practical DevOps responsibilities across Dockerized frontend/backend services, GitLab CI/CD pipelines, Linux servers, Nginx, SSL, and production/staging deployments.

Tech: React | TypeScript | Django | Python | PostgreSQL | Docker | GitLab CI/CD | Linux | Nginx | React Query | Leaflet

OneHealth

Frontend Engineer | Mar 2022 - Feb 2023

- Built browser-compatible delivery and product tracking applications using Next.js, TypeScript, and Redux.
- Improved application load speed by 30% through frontend optimization, asset handling, and efficient rendering patterns.
- Conducted UI/UX audits, refined product flows from stakeholder feedback, and collaborated with backend teams to improve API integration.

Tech: Next.js | TypeScript | Redux | REST APIs

eHealth4Everyone

Frontend Engineer | Mar 2021 - Mar 2022

- Developed web applications and healthcare analytics platforms using Vue.js and Django for public health stakeholders.
- Served as Frontend Engineer on MSDAT for the Federal Ministry of Health, supporting multi-source health data reporting and decision-making.
- Integrated DHIS2 and REST APIs for healthcare data visualization, reporting workflows, and analytical dashboards.
- Implemented client-side caching and data-handling strategies to improve dashboard responsiveness and reduce repeated API load.

Tech: Vue.js | Django | DHIS2 | REST APIs | IndexedDB | Data Visualization

Mira Technologies

Frontend Developer | Jan 2020 - Mar 2021

- Developed interactive web applications and data visualization dashboards with improved UI responsiveness and API-driven workflows.
- Reduced data processing time by 70% through optimized API integration, improved data presentation, and frontend performance refinements.

Tech: JavaScript | Frontend Development | APIs | Data Visualization

SELECTED PROJECTS

GTC App - 1840 & Company Talent Platform

TypeScript | Product UI | Workflow Logic - Staffing/talent platform supporting hiring and work-seeking workflows. Worked on user interfaces and core application flows for a staffing-related product.

eN-LIS - Electronic Laboratory Information System

React | Django | PostgreSQL | Docker - Laboratory information system supporting laboratory workflows, data capture, reporting, and operational visibility.

PHC Dashboard - National PHC Analytics Platform

React | Leaflet | Django | Data Visualization - Interactive analytics platform for visualizing primary healthcare data, maps, indicators, and operational metrics.

MSDAT - Multi-Source Data Analytic and Triangulation Resource

Vue.js | Django | DHIS2 | Analytics - Developed for the Federal Ministry of Health to integrate, analyse, and visualize data from multiple healthcare systems for reporting and decision support.

More product work: bzdavid.netlify.app

EDUCATION

University of Benin

B.Sc. Computer Science - Second Class Upper (2.1)
